Use your smartphone to make public touchscreens contact free.

Plus Six reduces the risk of surface spread germs by allowing you to avoid them.

(Denver, Colorado 07-14-2020)

The Covid-19 pandemic has us rethinking how to interact with public touchscreens we share with the world around us. As we navigate re-openings, many questions remain unanswered, yet science continues to tell us that minimizing cross-contamination in public is the safest way forward.

Our solution – we've created a utility-based interactive tool to solve this. Meet Plus Six, a contact-free solution that allows you to interact with public touchscreens and kiosks from your smartphone.

The concept is simple, effective and intuitive. Use a QR code to connect to a public screen in seconds, turning your smartphone into a touchpad controller. Safely use your phone to perform the tasks you've been doing with your finger.

Developed as a cross-platform solution, Plus Six is ready with Software Developer Kits for existing touchscreen technologies running on browser, Windows and iOS systems, with the Android SDK under development. Plus Six requires no consumer-level downloads, and has no security hurdles once integrated within a touchscreen system.

Plus Six is working on a consumer facing application intended to provide personal preferences and shortcuts, while also working directly with brands to create unique experiences based on the interaction tool.

If you would like more information about Plus Six, please visit www.plus-six.com or contact us at connect@plus-six.com
